## ACCOUNTING FOR JOINT VENTURE FORMATION

## Ex. 1 Contribution to JV in return for interest in JV

$X$ contributes land worth $\$ 750,000(B V=\$ 400,000)$ and equipment worth $\$ 1,200,000(B V=\$ 600,000)$ in return for a $50 \%$ interest in the JV. Y contributes cash of $\$ 1,950,000$ for a $50 \%$ interest in the JV. The equipment has a remaining useful life of 5 years.

What is the entry that should be recorded by X ?

|  | DR | CR |  |
| :--- | :---: | :---: | :--- |
| Investment in JV | $\$ 1,950,000$ |  |  |
| Land (BV) |  | 400,000 |  |
| Eqpt. (BV) | 600,000 |  |  |
| Def'd gain, land (X's share) |  | 175,000 | - Eliminate on proportionate consolidation |
| Def'd gasn, eqpt (X's share) |  | 300,000 |  |
| Def'd gain, land (Y's share) |  | 175,000 | - Defer and amortize to income over life of |
| Def'd gann, eqpt (Y's share) |  | 300,000 | asset (eqpt) or venture (land) |

Basic idea: recognize the other venturer's share of the gain, but only on a defer and amortize basis (no immediate recognition). Don't recognize your own portion of the gain, so reduce asset carrying values and depreciation to historic cost for this portion.

## Ex. 2 Contribution to JV in return for interest in JV plus cash

$X$ contributes land worth $\$ 750,000(B V=\$ 400,000)$ and equipment worth $\$ 1,200,000(B V=\$ 600,000)$ in return for a $\$ 700,000$ in cash from the JV and a $50 \%$ interest in the JV , worth $\$ 1,250,000$. Y contributes cash of $\$ 1,250,000$ to the JV (of which $\$ 700,000$ then goes to X ) for a $50 \%$ interest in the JV, worth $\$ 1,250,000$.

To see all this, contemplate the JV balance sheet upon formation:
Assets $\quad \underline{\text { Shareholder Equity }}$

| Cash (from Y) | $\$ 550,000$ | Common Stock (X) | $\$ 1,250,000$ |
| :--- | ---: | ---: | ---: |
| Assets (from X) | $\underline{1,950,000}$ | Common Stock (Y) | $\underline{1,250,000}$ |
|  | $\underline{\$ 2,500,000}$ |  | $\underline{\$ 2,500,000}$ |

What is the entry that should be recorded by X ?
$\$ 700,000$ of the $\$ 1,950,000 \mathrm{FV}$ received is in the form of cash. Therefore, there is culmination of the earnings process (ie, the gain is realized) to the extent of the cash proportion.

So, $X$ takes $\$ 700,000 / \$ 1,950,000 \mathrm{X} \$ 950,000$ gain $=\$ 341,026$ to income immediately. Another way to calculate this is:

Sales proceeds (= cash received)
\$700,000
Related BV portion (\$700,000/ \$1,950,000 X \$1,000,000)
358,974
Immediate gain ("culmination" to extent of cash)
$\underline{\underline{341,026}}$
The total dispostion of the \$950,000 gain is as follows:

| Portion recognized immediately | $\$ 341,026$ |
| :--- | ---: |
| Portion defer and amortize to income | $\underline{133,974}$ |
| Y's share of gain | 475,000 |
| X's share of gain (eliminate on proportionate consolidation) | $\underline{475,000}$ |
|  | 950,000 |

## ACCOUNTING FOR JOINT VENTURE FORMATION

So, the entry by X on formation is as follows:

|  | DR | CR |  |
| :---: | :---: | :---: | :---: |
| Cash | \$700,000 |  |  |
| Investment in JV | \$1,250,000 |  |  |
| Land (BV) |  | 400,000 |  |
| Eqpt. (BV) |  | 600,000 |  |
| Def'd gain, land (X's share) |  | 175,000 | - \$475,000 eliminated on proportionate |
| Def'd gajn, eqpt (X's share) |  | 300,000 | consolidation. |
| Gain, land* |  | 125,641 | - \$341,026 recognized now |
| Gain, eqpt* |  | 215,385 |  |
| Def'd gȧ̇n, land |  | 49,359 | - \$133,974 defer and amortize to income over life |
| Def'd galn, eqpt |  | 84,615 | of (eqpt), life of JV (land) |
| * Land and equipment gains are \$950,000 total gain x $\$ 3$ | d based on r | ive total | $\text { ns, e.g. land }=\$ 350,000 \text { gain } /$ |

## Ex. 3 Contribution to JV in return for interest in JV plus cash, but some of the cash came from borrowings by the JV

X contributes land worth $\$ 5,000,000(B V=\$ 2,000,000)$ in return for $\$ 1,000,000$ in cash from the JV and a $40 \%$ interest in the JV, worth $\$ 4,000,000$. Y contributes $\$ 500,000$ in cash to the JV in addition to other assets worth $\$ 5,500,000$ for a $60 \%$ interest in the JV, worth $\$ 6,000,000$. Upon formation, the JV borrowed $\$ 1,750,000$ from the bank.

To see all this, contemplate the JV balance sheet upon formation:

## Assets Liabilities and Shareholder Equity

| Cash (from bank) | $\$ 1,250,000$ | Bank | $\$ 1,750,000$ |
| :--- | ---: | ---: | ---: |
| Other Assets (from Y) | $5,500,000$ | Common Stock (X) | $4,000,000$ |
| Land (from X) | $\underline{5,000,000}$ | Common Stock (Y) | $\underline{\underline{6,000}, 000}$ |
|  | $\underline{\$ 1,950,000}$ |  | $\underline{\$ 11,750,000}$ |

What is the immediate gain from contribution to the JV that X can recognize?

|  | DR |
| :---: | :---: |
| Land - FMV |  |
| - COST |  |
| Total gain |  |
| X's share (40\%) |  |
| Gain to recognize now$(800 / 5000) \times 3,000,000 *$ |  |
| Gain to defer and amortize |  |
| *Cash to X | 1,000,000 |
| Cash to JV by Y | 500,000 |
| = Cash to X from JV borrowings | 500,000 |
| X's share of such borrowings (40\%) | $\underline{\underline{200,000}}$ |
| So net cash to X is | 1,000,000 |
|  | $(200,000)$ |
|  | \$800,000 |

| CR |  |
| :---: | :---: |
| \$5,000,000 |  |
| 2,000,000 |  |
| \$3,000,000 |  |
| \$1,200,000 | - eliminated against land on proportionate consolidation. |
| 480,000 | - Y's share of gain |
| 1,320,000 |  |
| 3,000,000 |  |

## ACCOUNTING FOR JOINT VENTURE FORMATION

Basic idea: the $\$ 200,000$ of cash might have to be repaid to bank, which negates the cash receipt, (thus no immediate gain recognition for this portion).

The entry by X on formation is as follows:

|  | DR | CR |  |
| :--- | :---: | :---: | :--- |
| Cash | $\$ 1,000,000$ |  |  |
| Investment in JV | $\$ 4,000,000$ |  |  |
| $\quad$ Def'd gain, land (X's share) |  | $1,200,000$ | - eliminated on proportionate consolidation |
| Land (BV) | $2,000,000$ |  |  |
| Def'd gain, land | $1,320,000$ | -.defer and amortise to income over JV life |  |
| Gain, land | 480,000 | - recognize now |  |
