BOOK DESCRIPTION

Aristotle on the Causation of Action

This is the first monograph that systematically examines how Aristotle's theory of the four causes illuminates his theory of action. The fact that this connection has not been systematically explored is surprising, since Aristotle thinks that actions are natural motions and that natural motions should be explained in light of the four causes. Commentators have not sufficiently appreciated how truly distinctive Aristotle's philosophy of action is because they have not taken adequate account of the motivations for and ramifications of Aristotle's causal pluralism. This book begins by giving a novel account of Aristotle's causal pluralist approach to scientific explanations. Next, it spells out how Aristotle deploys his four-causal theory in explaining natural motions, and what the advantages are of doing so. The central chapter proposes a way of systematizing Aristotle's scattered remarks about action in accordance with his causal theory of natural motions in general, yielding a four-causal account of action. The rest of the book shows how this account clarifies Aristotle's discussions of voluntariness, responsibility, weak-willed action, and happiness.
