Truckers are concerned about the physical conditions of the freeway:

- L. lane closures, lane width, lane markings
- S. signage (e.g. out the freeway)
- W. weather conditions, especially snow removal
- Construction delays, the amount of time spent on the road
- Road surface - prefer even, non-bumpy roads so that the truck won’t bounce up and down all the time

Conclusions:

- Truckers complained about being cut-off, the application of brakes in front of them (i.e., to slow them down), and the amount of time spent on the road
- Introduce safety concerns explicitly in the design of LOS
- Physical conditions of the road - it is difficult to design LOS measures that deal with maintenance
- Spirit of safety - it is not traffic density, but promises to them, rather it is traffic flow

Road Knights Team

The team's mission is to help road users, including truck drivers, share the road. The team's goal is to help road users be partners in making our roadways safer by encouraging all road users to be partners in driving safely on the road.
