RESEARCH

CURRENT RESEARCH

I study the cultural geography of land use change and the politics of planning processes at the urban-rural interface, particularly concentrating on intersections of urbanization, nature conservation, and agriculture activism. My work is ethnographic and historical and focuses on the relationships between land use and landscape ideologies as they can be understood through everyday material and representational practices. My interests include alternative agri-food

movements, the concepts of place, landscape, and nature, and epistemological issues involved in the interplay between political ecology and other disciplinary studies of nature-society relations.

RESEARCH TOPICS

1. The greening of urban dispersion: metropolitan edge change; exurbanization and greenspace planning and negotiation; sustainable consumption and production
2. Conspicuous production: urban and peri-urban agriculture and forestry; modern subsistence and community farming; everyday political economy
3. Modern pastoral: social practices that construct and produce cultural landscapes focused on combinations of nature and production
